

AutoCapture

Highlighted, Captured, Trained

These 3 words describe the ease with which FileDirector AutoCapture will inspire you. The dedicated FileDirector AutoCapture Client helps you focus on the essentials - the incoming invoice.

This starts with a maximized display area for the document and continues in mouse-based training.

FileDirector AutoCapture knows whether you want to train a date, an address or an amount and highlights only this in color.

Always Informed

The FileDirector AutoCapture status shows you in clear diagrams what the system is currently processing.

This information can be sent to you by mail on a regular basis which makes it easy to keep an eye on requirements.

Training Applied

FileDirector AutoCapture learns with each trained document and thus supports you more and more when capturing new, unknown documents.

FileDirector AutoCapture learns what you need and where you can find it on a document - completely automatically.
